

# e-Quals Unit Syllabus

Level 3 Maintain ICT equipment and systems  
(7266/7267-510)

## **About City & Guilds**

City & Guilds is the UK's leading provider of vocational qualifications, offering over 500 awards across a wide range of industries, and progressing from entry level to the highest levels of professional achievement. With over 8500 centres in 100 countries, City & Guilds is recognised by employers worldwide for providing qualifications that offer proof of the skills they need to get the job done.

## **City & Guilds Group**

The City & Guilds Group includes City & Guilds, ILM (the Institute of Leadership & Management) which provides management qualifications, learning materials and membership services, NPTC which offers land-based qualifications and membership services, and HAB (the Hospitality Awarding Body). City & Guilds also manages the Engineering Council Examinations on behalf of the Engineering Council.

## **Equal opportunities**

City & Guilds fully supports the principle of equal opportunities and we are committed to satisfying this principle in all our activities and published material. A copy of our equal opportunities policy statement *Access to assessment and qualifications* is available on the City & Guilds website.

## **Copyright**

The content of this document is, unless otherwise indicated, © The City and Guilds of London Institute 2007 and may not be copied, reproduced or distributed without prior written consent.

However, approved City & Guilds centres and learners studying for City & Guilds qualifications may photocopy this document free of charge and/or include a locked PDF version of it on centre intranets on the following conditions:

- centre staff may copy the material only for the purpose of teaching learners working towards a City & Guilds qualification, or for internal administration purposes
- learners may copy the material only for their own use when working towards a City & Guilds qualification
- the *Standard Copying Conditions* on the City & Guilds website.

Please note: National Occupational Standards are not © The City and Guilds of London Institute. Please check the conditions upon which they may be copied with the relevant Sector Skills Council.

## **Publications**

City & Guilds publications are available on the City & Guilds website or from our Publications Sales department at the address below or by telephoning +44 (0)20 7294 2850 or faxing +44 (0)20 7294 3387.

Every effort has been made to ensure that the information contained in this publication is true and correct at the time of going to press. However, City & Guilds' products and services are subject to continuous development and improvement and the right is reserved to change products and services from time to time. City & Guilds cannot accept liability for loss or damage arising from the use of information in this publication.

# Contents

<b>Unit 510</b>	<b>Maintain ICT equipment and systems 3</b>	<b>2</b>
Outcome 1	identify types of system maintenance	4
Outcome 2	collect information on technical problems with ICT systems	5
Outcome 3	evaluate technical problems and implement solutions	7
<b>Unit record sheet</b>		<b>9</b>

### Rationale

This unit will enable the candidate to maintain ICT networks and multi-user systems.

### Learning outcomes

There are **three** outcomes to this unit. The candidate will be able to:

- identify types of system maintenance
- collect information on technical problems with ICT systems
- evaluate technical problems and implement solutions

### Guided learning hours

It is recommended that 60 hours should be allocated for this unit. This may be on a full time or part time basis.

### Connections with other qualifications

This unit contributes towards the knowledge and understanding required for the following qualifications:

#### NVQ for IT Professionals (4324) Level 3

Outcome	Unit
1	319.1 The testing process to be followed
2, 3	319.2 The purpose of testing
3	319.3 What test preparation and conclusion activities are necessary for specific tests

#### NVQ for IT Services Customer Systems Support (4348) Level 3

Outcome	Unit
1, 2	21.1 Prepare tests for IT systems
2, 3	21.2 Test IT systems
3	21.3 Return IT systems to service after testing
2	22.1 Collect information on technical problems with IT systems
3	22.2 Evaluate information on technical problems with IT systems
3	22.3 Identify potential causes of technical problems with IT systems
3	23.1 Supply solutions for technical problems with IT systems
3	23.2 Implement technical solutions for IT systems
3	23.3 Assist the recovery of the operation of IT systems

## Key Skills

Application of number	N/A
Communication	2.1, 2.2, 2.3
ICT	2
Working with others	N/A
Problem solving	3
Improving own learning	2

## Assessment and grading

Assessment will be by means of a **set assignment** covering both practical activities and underpinning knowledge.

## Unit 510

### Outcome 1

## Maintain ICT equipment and systems 3

### identify types of system maintenance

#### Practical activities

The candidate will be able to:

- 1 prepare a system maintenance plan (for peer to peer and client server) to include
  - a equipment comprising the system
  - b maintenance options for each item of equipment
  - c method of recording maintenance carried out
- 2 identify types of system maintenance
  - a preventative - routine, such as backup
  - b predictive - forward prediction, what monitoring system used to predict maintenance likely in the future
  - c remedial – repair, component replacement, software upgrade, operating system repair.

#### Underpinning knowledge

The candidate will be able to:

- 1 describe the properties of different types of maintenance
  - a preventative, eg time interval, hours run, processes completed (pages printed)
  - b predictive, eg system monitoring tools requests
  - c remedial, eg break/fix
- 2 describe the key activities in each type of maintenance, including preventative, predictive and remedial, and their benefits to, eg servers, networks, high volume printers
  - a preventative, eg replacement of specified components, inspection and assessment of wear or degradation, cleaning, lubrication, measurement and adjustment
  - b predictive, eg replacement/adjustment of identified components
  - c remedial, eg replacement/adjustment to effect a fault resolution
- 3 describe types of remote maintenance, eg remote log-in by service personnel, system to system diagnostic link
- 4 describe the importance of negotiating system priorities and availability with customers.

## Unit 510

### Outcome 2

## Maintain ICT equipment and systems 3

collect information on technical problems with ICT systems

### Practical activities

The candidate will be able to:

- 1 obtain information to resolve technical problems with ICT systems eg
  - a how the problem has manifested itself
  - b when the problem was identified
  - c frequency of probable occurrences
  - d results of tests
  - e is the fault solid or intermittent?
- 2 select and justify the test to be undertaken for a given problem eg
  - a physical/mechanical
  - b substitution
  - c electrical
  - d software
  - e measurement
- 3 ensure the tests have been applied correctly
- 4 create and maintain operational records.

## Underpinning knowledge

The candidate will be able to:

- 1 describe the information needed to resolve technical problems with ICT systems, eg problem isolation, system interrogation, system/unit histories, questioning relevant people (user, system administrator, direct supervisor, network administrator)
- 2 identify what types of technical problems could occur in ICT systems, eg
  - a continuous
  - b intermittent
  - c unusual
  - d on/off
  - e hardware – mechanical, electronic control
  - f firmware – corruption, wrong type
  - g operating system software – incompatibility, corruption
  - h application software network software – incompatibility, corruption, configuration
  - j network connection environmental
  - k user induced
  - l system changes
- 3 describe how to ensure tests have been applied correctly, eg
  - a by referral to test specifications
  - b from previous personal experience/knowledge
  - c by referral to higher technical expertise
  - d by confirmation of expected results of tests
- 4 identify types of technical problems which might occur in ICT systems, eg
  - a hardware component failure/degradation
  - b operating system configuration/corruption problems
  - c system capacity problems
  - d software/hardware compatibility
  - e transmission problems (routers, hubs, bridges)
  - f cabling problems
- 5 identify routine maintenance procedures
  - a cleaning
  - b virus scan
  - c defragmentation
  - d file and registry checks
  - e renewal of backup media
  - f revision of passwords/authorities.

**Unit 510**  
Outcome 3

**Maintain ICT equipment and systems 3**  
evaluate technical problems and implement solutions

**Practical activities**

The candidate will be able to:

- 1 identify any significant differences between the test data collected and the equipment specification, eg
  - a network configuration
  - b server
  - c router
  - d hubs/switches
  - e bridges
  - f work stations
  - g printers
- 2 determine the most effective solution and identify the resources required to resolve the problem, eg
  - a replacement system modules
  - b operating system and software upgrade/patches
  - c replacement cables/connections
- 3 implement the technical solution, and check that it has been carried out successfully
- 4 restore the system to operational use by, eg
  - a testing the system/sub-system
  - b confirming the problem has been resolved
  - c re-configuring to original
- 5 hand back to the customer providing demonstration/training as required.

## Underpinning knowledge

The candidate will be able to:

- 1 describe factors which may cause differences between actual and estimated performance, eg
  - a firmware version
  - b hardware revision
  - c engineering changes
  - d software version
  - e throughput
  - f capacity
  - g compatibility
- 2 identify factors not associated with the ICT system itself eg
  - a environmental
  - b consumables
  - c user
- 3 state what other information might be evaluated eg
  - a virus checking software
  - b system configuration
- 4 state types of resources which may be needed to apply solutions to technical problems, eg
  - a hardware
  - b software
  - c network
  - d environment
  - e human
  - f time
  - g customer input
  - h tools
  - j spare parts
- 5 identify where to access information on how to apply the solution, eg
  - a reference materials
  - b consultation with immediate supervisors or experienced personnel
  - c from previously acquired knowledge.

# Unit record sheet

Use this form to track your progress through this unit.

Tick the boxes when you have covered each outcome. When they are all ticked, you are ready to be assessed.

Outcome	✓	Date
1 identify types of system maintenance	<input type="checkbox"/>	
2 collect information on technical problems with ICT systems	<input type="checkbox"/>	
3 evaluate technical problems and implement solutions	<input type="checkbox"/>
